

Tracking Outcomes at Helen Hayes Hospital: Outpatient Neurological Therapy Outcomes

Below are outcomes from outpatient neurological rehabilitation programs offered here at Helen Hayes Hospital. A majority of patients who continue their rehabilitation at Helen Hayes Hospital continue to achieve their goals. Occasionally goals are not attained. This may be due to a variety of reasons including the worsening health status of the patient, a denial of continued services by the insurance company, and sometimes due to poor follow through by the patient. At times goals may be set too high and the status of the patient does not allow for achievement of these high goals within the timeframe. At Helen Hayes Hospital, we work with the patient and for the patient, offering support through a set back, advocating for the patient with insurers, encouraging compliance with the program and providing assistance with setting mutually determined goals. At Helen Hayes Hospital, our goal is to help patients achieve their goal.
